

The Largest Domain Blocking Solution on the Market

Safeguard brands against unauthorized domains and impersonation.

Managing domain name portfolios can be time-consuming, expensive and fraught with reputational and financial risk. GlobalBlock improves and streamlines this process - saving time and resources by offering unmatched domain protection across 600+ web extensions, in one simple transaction.

How does it work?

GlobalBlock proactively blocks 600+ domain extensions and thousands of lookalike domains that match a brand or IP. Domain coverage spans country codes, new TLDs, and even Web3/Blockchain extensions. By blocking domain registrations at the Registry level, domains are seized before they are ever released to the public, ensuring IP stay fully protected from unauthorized use.

Why GlobalBlock?

Unmatched Coverage

Largest and most diverse coverage of any domain blocking service.

Proactive Brand Protection

Registry-level block protects key terms and trademark variants from becoming active domain registrations.

Automation Of Domain Management

Renewals, registration, deletion and monitoring key features built-in.

Expanding Footprint

New extensions continually added so coverage grows over time.
